

## Terrace Building, Regina, SK

The Terrace Building was the first building built at the Regina Research Park and, thus, became its signature building. As such, there are many architectural and innovative, energy-saving features that earned the facility Natural Resource Canada's Energy Award in 2002.

Services included providing advanced building design guidelines, design facilitation and control system design.

- Signature Building for the start of the Regina Research Park.
- 100% outside air with heat recovery
- 45% less energy than MNECB
- High performance building, no additional capital cost
- Fully commissioned facility
